ASTHMA CONTROL TEST™

How to use the test: Score your symptoms over the past 2 weeks (14 days). Add up the number of days you had symptoms. The total score is your Asthma Control Test score. A score of 0-4 means your asthma is well controlled. A score of 5-6 means your asthma is not well controlled. A score of 7-10 means your asthma is very poorly controlled.

Score	Interpretation

Gina 2017 asthma guidelines.

In steps 2 - 4, increasing doses of a daily ICS are preferred, with the option to switch to MART in steps 3 and 4 (as in good guidance).11 Referral to a specialist is recommended in step 4, where the child is prescribed an average dose-LABA or low-dose ICS-Formoterol MART. The FORMOTEROL is a LABA RAPID-ONSET. TAKE EFFECT WITHIN 1-3 minutes and lasts about 12 hours. Combined inhaled budesonide-formoterol as needed in mild asthma. Pharmacological treatment Gina has made a fundamental change to her recommendations for the pharmacological treatment of asthma in 2019.14 Gina no longer recommends regular use of short-acting beta2 (SABAs) for people diagnosed with asthma; All should be prescribed ICSs, regularly or as needed for respiratory symptoms. In this author's opinion, the poor UK asthma outcomes could be substantially improved if the recent key GINA recommendations were implemented. Children aged 5 years and younger, it is important to consider the risks of under- and over-treatment in children 5 years and younger; Therefore, diagnosis is important. Available at: www.rplondon.ac.uk/sites/default/files/why-asthma-still-kills-ful-report.pdf Carney T. London: RCP. 2014. Before deciding to prescribe according to track 2, the probability that the patient will adhere to a regimen requiring a regular ICS or an ICS-LABA should be considered; If considered unlikely, the patient may rely solely on his Saba with the risks as described above. The evidence of the use of an ICS-Formoterol In particular, rather than a SABA in step 1, is inferred from the trials with step 2 patients in whom, for example, the combination was significantly superior in preventing severe and moderate attacks. Besides, there's no safety and efficacy of a Saturday alone in a given
